

SmokeGate: SG4A

The Future of Cyber Security

The SmokeGate SG4A: Multi-Vendor Protection

Worried nothing can keep your data safe? That changes now with the SmokeGate SG4A. It connects your office to a stealth SmokeNet VPN service providing protection for your entire office. Your data is not just encrypted, it is hidden in the network and constantly moving. The SG4A can connect to up to three network providers scrambling data across all three. This device also has the horsepower to handle high bandwidth connections transmitting at full system line rate.

Other VPN services leave your data exposed to Man in the Middle, Injection, Spoofing, Recording and other types of network facing attacks. A SmokeGate removes network attack vectors. If you want the best in proactive cybersecurity, the SmokeGate SG4A combined with SmokeNet VPN Moving Target Defense is the next generation of network data protection.

KEY FEATURES

- Four GE ports allowing up to three carriers.
- 200 GB Encryption Cache for Greater Time Protection
- Fast, Four Core Processing for Increased Throughput
- Fanless, Silent Operation
- Rated for small to medium offices (50 people or less)
